Taipei, June 19, 2023

Check out TITAS 2023 Sustainability Online Show!

TITAS, the 27th Taipei Innovative Textile Application Show, as a sourcing hub for innovative textiles in Asia, will be held at Taiwan's Taipei Nangang Exhibition Center, Hall 1 from 17-19 October 2023. TITAS creates an Online-Merge-Offline (OMO) exhibition platform dedicated to showcasing the latest innovation and creativity of the textile and machinery fields. The first debut of the "Functional Applications" Online Show on April 18 has received a good response. The second wave of "Sustainability" Online Show will kick off on June 19. Through TITAS digital platform, we can see the textile industry advance towards sustainable development goals.

In recent years, environmental and climate change issues have been the top concerns for the globe. The governments have formulated related policies to achieve the goal of "2050 Net Zero Emissions". The EU's "Carbon Border Adjustment Mechanism (CBAM)" will be the first to enter into force in its transitional phase as of 1 October 2023 that will usher in a new era of carbon pricing. The leading sports brands, like Nike and adidas require their global supply chains to cut carbon emissions 30% by 2030. To advance circularity and adopt decarbonization solutions at the scale of the value chain are important ways for the industry to mitigate the impacts of the climate crisis.

This Sustainability Online Show will showcase TITAS exhibitors' selected products from June 19 to August 20 and the product scope will include:

- Sustainable Materials

1. Fiber modification and bio-based materials — materials made from recycling waste-gas-based fiber, agricultural waste, bio-based polymer, biodegradable fiber, recyclable membrane, etc.
2. Pre-consumer recycled materials — materials made from recycling production waste during the process of spinning, weaving/knitting, cutting, etc.
3. Post-consumer recycled materials — materials made from recycling apparels, fishing nets, mono-materials, etc..

- Sustainable Manufacturing materials

Materials made from solution-dye, low liquor ratio dyeing, waterless dyeing, low-temperature dyeing, solvent-free, cool transfer printing, etc.
