

GRANDETEX

Showcasing the Recycled Nylon Solution Dye

For TITAS 2019, GrandeTex targets on recycled PET bottles and adds in the company's signature RICH-y® to create the eco-friendly yarn — the ECO-RICH-y yarn. In addition to being eco-friendly, it is also equipped with long-lasting odor proof and anti-UV features.

GrandeTex's RICH-y® yarn is already successful and widely received as its anti-bacterial, odor proof, and anti-UV qualities are embedded during the production process instead of using additives, therefore more long lasting and would not create further pollution. When blended with other polyesters or nylon yarns, no further additives are necessary. Now GrandeTex offers another alternative - RICH Spun yarn. These yarns are cost-effective, high value-added choices.

Another product highlight is Recycled Nylon Solution Dye Yarn that is made with scads from the production processes. Through GRS-certified process, the scads are melted, filtered, and colored before spinning, no further dyeing is needed. The process saves more than 80% of water consumption and cuts down carbon emission by 18%. GrandeTex combines the yarn with DuPont bio membrane to produce 2 and 3 layers' functional fabrics with waterproof and emollient features, perfect for outdoor brands that seek for eco-friendly and functional products.
