

NEW WIDE GROUP

Sustainable Environmental Protection, Innovative Development

New Wide Group plans to include five sections in the TITAS 2019, including Water Saving, Breathable, Eco & Biodegradable - Sustainability series; Aerogel, Cottony – Innovation series.

● Sustainability series

- ◆ Water Saving series: Using eco-friendly materials and technologies, such as dope dyeing, digital printing and recycled ocean plastic to reduce the impact on water resources.
- ◆ Breathable series: Mesh fabrics made with recycled polyester cooling yarn and xylitol cooling print create a cool and comfortable feeling when contacting with the skin.
- ◆ Eco & Biodegradable series : Fabrics made with biodegradable polyester fiber blended with natural fibers will decompose eventually in landfills.

● Innovation series

- ◆ Aerogel series: Aerogel knit is lightweight featuring thermoregulation by incorporating aerogel into yarns.
- ◆ Cottony series: The cottony fabric developed by New Wide has a natural cotton look and feel while possessing the functionality and durability of manmade fibers.
