

SINGTEX

Turning Waste into Gold, Creating New Value for Textiles

Welcoming its 30th anniversary, SINGTEX is always focusing on "running a business that warms the heart". Recognizing the impact of rapid climate change on the survival of human beings, SINGTEX has invested hugely in establishing a pioneering R&D center and high precision eco-dyeing center. By adopting solvent-free dyeing and finishing process and waterless yarn dyeing technology, using power-saving equipment and water-saving dyeing machines, installing smart grid and sewage treatment system, and shifting from fossil fuels to natural gas, SINGTEX is a paradigm among Taiwanese manufacturers of eco and functional textiles, with its products and technologies approved and confirmed by OEKO-TEX[®], GRS and bluesign[®], as well as its ownership of 35 global patents.

Believing in "no absolute waste on earth", SINGTEX developed in 2009 its exclusive S.Café[®] yarn, made from coffee grounds. During the process, the company has also extracted coffee oil from coffee grounds to developed P4DRY[™] printing technology, AIRMEM[™] waterproof and breathable coffee membrane, and AIRNEST[™] eco-friendly foam, all providing functions to make wearers feel comfortable under various weather conditions. STORMFLEECE[™], a green and single-layer woven fleece from the company, features wind breaking, water repellent and heat retention. Boasting slowing down the release of micro plastic fibers into oceans. SINGTEX is devoted to giving a healthier and more comfortable future to human beings by developing high quality textiles with environmentally friendly materials. Meanwhile, the company is calling for attention to and respect for intellectual property rights so that both individual companies and the industry can increase positive energy and enjoy sustainable advantages.
