

DEVELOPE CHIME ENTERPRISES CO., LTD.

Upcycling is coming!

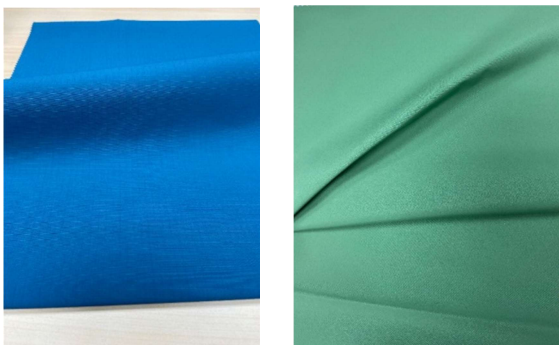

We, DECE, founded in 1994, specialized in woven functional fabrics for around 30 years. Our fabrics are from nylon, polyester, natural fiber and blended textiles. The finished products range from ski, outdoor, urban to fancy wears. With rich experience in this field, keeping reaching and developing recycled functional fabric is our mission, to reduce the impact on the environment.

Our declaration for this year at TITAS 2022 has two topics:

1. Upcycling: recycled fabric from used clothes and textiles.

2. Bio-based products: minimize the impact of our world and reduce our carbon footprint. Protecting our earth is our responsibility without any excuse. Only by doing this, we can survive on our earth peacefully. DECE always thinks of a better future & life for everyone.

Due to epidemics over these two years, we include digital methods to promote our products at the same time. We will take you into the HD visual effects on the garment, which will shorten the limitation of time and space. Through this technology, garments will become easier to present.
