

## Hansc & Co.

### A path towards sustainable oceans

Starting from professional shirt manufacturer, Hansc & Co. possesses over 20 years of experience in garment industry, and has hundreds of well-known clients all over the world. The category of product contains a various range, including formal shirt, casual shirt, functional shirt, multi-purpose shirt, and has gradually become more complete.

In recent years, global climate change has already had observable effects on the environment, the shortage of raw materials and awareness of environmental protection accelerates the changing of production technology. As a result, in 2019 Hansc & Co. takes a series of actions to innovate our product.

First of all, sustainable materials are utilized, such as Polyester fabric derived from recycled PET bottles. To address the marine conservation issue, old fishing nets are collected and transformed into Nylon fabric. Furthermore, discarded oyster shells and recycled PET bottles are combined to create the Seawool fabric.

Inside the factory, energy is efficiently circulated using smart techniques. For instance, rainwater is collected, filtered, and utilized as service water for daily operations. Moreover, instead of coal, the factory generates power by incinerating cutting waste. This process effectively converts heat energy into power, fulfilling the factory's energy requirements.

Currently, we are continuously working on the development of eco-friendly products and make an effort to take corporate social responsibility. Our aim is to establish a sustainable and circular economy model, hoping peaceful coexistence between humans and nature.
