

HUA MAO NANO-TECH CO., LTD.

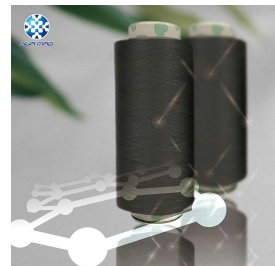

In the textile and health industry, Hua Mao shoots three healthy arrows

Hua Mao launched 3 brand new functional yarns this year. One is graphene yarn with a constant temperature function, the other is selenium yarn with a body-friendly function, and the third is added seaweed polysaccharide in Cool Jade yarn. This year, Hua Mao Nano-Tech launched three functional yarns for the textile industry that appeal to health function.

Selenium is well-known for the health function of the human body. Hua Mao Nano-Tech has launched yarns containing selenium. The whole garment wraps the human body and forms a healthy "selenium shield". With its moisturizing and skin-friendly design, the healthy element is applied to textiles and clothing to help improve health care for everyday people.

Graphene, a high-tech material with excellent electrical properties, offers the best performance in textiles and is temperature-regulated. When the environment is cold, graphene absorbs ambient infrared rays and converts them into heat, thereby increasing the temperature of the fabric to reduce body temperature loss and keep warm. When the environment is hot, graphene has high thermal conductivity and can quickly export body heat out of the body to cool down. Therefore, graphene is a high-tech material with a constant temperature function for all seasons.

Seaweed polysaccharides were originally a weapon for seaweed to defend against foreign enemies. Hua Mao Nano-Tech combines this bioactive polysaccharide on the basis of cool-feeling materials to add health functions to summer cool-feeling clothing.

The large health industry is an inevitable trend for almost all industries. Hua Mao Nano-Tech adheres to the production of nano-material manufacturing technology, and has been investing in research and development for consumers' health needs in clothing. The introduction of high-tech materials and high-end technologies such as organic and inorganic integration is the result of our hopes to integrate "technology-health-fashion" textiles into every household so that consumers can enjoy the wonderful experience of dressing comfortably and healthily.
